

Moon Versus Earth—A Comparison

Characteristic	Moon	Earth
image		
1. order from sun	Moon of 3 rd planet from sun	3 rd planet from the sun
2. average distance from Sun (miles)	93,000,000 miles (about earth's distance on average)	93,000,000 miles (93 million miles)
3. average diameter (miles) 	2159 miles (about 1/4 earth's diameter)	7918 miles
4. shape	sphere	sphere
5. surface gravity at equator (1 gravity = Earth's)	0.17 gravity (about 1/6 earth's gravity)	1 gravity
6. day length— 1 spin on axis (Earth days)	About 28 days	1 day
7. temperature at surface (°F) (note: water freezes at 32°F, boils at 212°F)	-280°F (night) to 260°F (day)	-128°F (night, poles) to 131°F (day, equator) [Average 57°F]
8. surface broken into large chunks (plates) which move?	No	Yes
9. layer of gases (atmosphere) surrounds the object?	No	Yes
10. composition of atmosphere—main gases (% by volume)	None (no atmosphere)	78% nitrogen (N ₂), 21% oxygen (O ₂), 0.9% argon (Ar), 0.04% carbon dioxide (CO ₂), 0 to 3% water vapor (H ₂ O _{vapor})
11. weight of atmosphere on every square inch of surface 	0 (no atmosphere)	14.7 pounds (per square inch)
12. water (H ₂ O) exists in liquid form?	No	Yes
13. water (H ₂ O) exists in solid form (ice)?	Very likely—some ice detected in craters at poles.	Yes
14. evidence of life detected?	No	Yes
